

# Change Statement #1

2 June 2015

## Change Introduction

Luminary Promotions have recently started contractual negotiations with the Auckland City Council regarding the creation of a 'wayfinding' application. The application would use Augmented Reality technology to guide tourists through Auckland City.

Luminary has requested that the scope of the LuminAR project to be changed to accommodate for producing the 'wayfinding' application— instead of the previously proposed AR platform.

---

### 1. Rationale for Change

The current Project Plan (Version 1.1, dated 20 April 2015) consists of two main phases: a research phase and a development phase. The research phase was to research into Augmented Reality to try and find an exciting, new use for the technology that would entice users.

By instead producing the 'wayfinding' application, we will be able to gather the requirements directly from the Council, removing the need for the previously planned research phase. Development of the 'wayfinding' application would be more concrete in scope and expectation than the platform application would be.

---

### 2. Review

Initially we allocated four working weeks for researching the potential uses of Augmented Reality and one week for determining the approach to be implemented. By instead developing the 'wayfinding' application, we would remove the need for the research and determination phases. The previously conducted research would not go unused as most of it is still fully applicable to the development of the 'wayfinding' application. More time for the development of the application would be possible as a result of this change.

---

### 3. Change Implementation Proposal

A new version of the Project Plan needs to be created (Version 2.0). Current research will be halted. A requirements elicitation phase will begin and should take no more than two weeks. Luminary will work with the Council to gather the requirements 'wish list' of the application.

Once all of the requirements have been gathered, a short research phase will commence to determine the viability of the requirements. Knowledge gained during this research will be used to create a complete, prioritised requirements specification document. Development of the application can commence once this document has been produced and approved.

---

### 4. Relevant Documentation

All of the documents referenced in or otherwise relevant to this agreement is listed below. If you require a copy of any of the referenced documents, please contact the Project Leader.

Document Title	Version	Date
Project Plan (current)	Version 1.1	20/04/15
Project Plan (new)	Version 2.0	TBD

---

## 5. Change Approval/Denial

Change Approved.

---

## 6. Authorisation

By signing this change statement, I approve of the change(s) proposed. I have a complete understanding of all sections of this document and any relevant documentation. I confirm that I am in agreement with all sections above and any relevant documentation.
