## 0.0 Version History

#### VERSION 1.0

Version 1.0 is the initial version of the Product Backlog Document. This version of the document was created as part of Sprint Zero: Development Setup Phase. New versions of the document will be produced during each sprint to address the sign-off dates of each user story.

#### VERSION 1.1

Version 1.1 has been changed to address the recommendation provided by the AUT marking team. The log of changes is below:

| Section    | Overview of Changes   | Date     |
|------------|---|----------|
| Title Page | Updated version number and date.  | 12/10/15 |
| 3.0        | User stories have been prioritied. Vague acceptance tests have been revised.    | 10/10/15 |
| 3.1        | US 5: Select view options has been cancelled. This user story was not required. | 12/10/15 |

#### 1.0 Introduction

This Product Backlog covers all of the user stories related to development of the Unity plugins and Testing Application. The Testing Application will be used to ensure the functionality of the Unity plugins, and will be referenced by Luminary when creating the Platform Application. The sole user of the testing application is the System Developer, as defined in 2.2.

#### 2.0 Definitions

#### 2.1 Testing Application

The Testing Application will be developed as part of the LuminAR project. The Testing Application will allow the LuminAR group and Luminary to ensure the functionality of the Unity plugins. The Testing Application will act as a proof-of-concept of the functionality of the Unity plugins.

The Unity plugins will be used by the Testing Application to:

- · Retrieve the testing device's location updates.
- Display the current location in plaintext.
- · Establish a connection with a test remote information server.
- Load a set of test nodes from the remote database.
- Add the loaded nodes to a locally stored SQLite database.
- Determine the distance of a node from the testing device's current location.
- Determine the direction (heading) of a node from the testing device's current location.
- · Display a list of locally stored nodes.
- · Filter nodes by a given distance parameter.
- Display a list of the nodes within a given distance parameter.
- Make changes to locally stored nodes.
- Remove locally stored nodes.
- Insert a new node into the local database.
- · Retrieve the device's true north heading updates.
- Display the device's true north heading in plaintext.
- · Maintain a debug log.

## 2.2 System Developer

The System Developer is the sole user of the Testing Application. The System Developer will use the Testing Application to ensure the functionality of the Unity plugins. The System Developer will develop the Platform Application following delivery of the Testing Application and Unity plugins.

### 2.3 Definition of Done/Sign-Off Criteria

The Definition of Done (DoD) or Sign-Off Criteria is the exit-criteria used to determine whether a User Story has been completed.

The following points are a checklist that determines the completion status of a User Story. All points must be satisfied to deem a User Story as completed.

- 1. Relevant acceptance tests created for the User Story.
- 2. Unit tests produced before code has been written (test-first programming).
- 3. Code has been produced via peer programming, or cross-checked by at least two developers.
- 4. Code can be compiled without errors.
- 5. Code has been commented correctly.
- 6. Correct naming conventions have been used.
- 7. All relevant unit tests pass.
- 8. All relevant functionality tests have been logged and have passed.
- 9. All acceptance tests have been signed off.
- 10. Source code documentation has been updated as required.

## 3.0 User Stories

The User Stories below have been prioritised by the group. The estimated effort is measured in story points, where one story point = one hour of work. The estimated effort was calculated using PlanningPoker (see 4.0).

| Title:             | Retrieve location updates  | US:            | 1           |
|--------------------|--|----------------|-------------|
| Modification Date: | 24/08/15   | Sign-Off Date: | N/A         |
| User Story         | As the System Developer, I want to retrieve the test updates so that I can create a location-aware Platfo  |                | location    |
| Priority           | High   |                |             |
| Estimated Effort   | 3 story points   |                |             |
| Acceptance Tests   | <ol> <li>The Testing Application requests permission to</li> <li>The Testing Application delegates location updated location manager.</li> </ol>                     |                |             |
| Title:             | Display current location   | US:            | 2           |
| Modification Date: | 24/08/15   | Sign-Off Date: | N/A         |
| User Story         | As the System Developer, I want the test device's of the screen so that I can ensure the accuracy of the   |                | displayed   |
| Priority           | High   |                |             |
| Estimated Effort   | 2 story points   |                |             |
| Acceptance Tests   | <ol> <li>The test device's current longitude and latitude<br/>Testing Application.</li> <li>The displayed location information is updated w<br/>received.</li> </ol> |                |             |
| Title:             | Establish a connection   | US:            | 3           |
| Modification Date: | 24/08/15   | Sign-Off Date: | N/A         |
| User Story         | As the System Developer, I want to establish a con server so that I can transmit information to the devi   |                | information |
| Priority           | Low  |                |             |
| Estimated Effort   | 5 story points   |                |             |
| Acceptance Tests   | Required internet access permissions are reque   | ested/granted. |             |

| Title:             | Load test nodes   | US:            | 4        |
|--------------------|---|----------------|----------|
| Modification Date: | 24/08/15  | Sign-Off Date: | N/A      |
| User Story         | As the System Developer, I want to load a set of test database so that I can confirm the functionality of the database and transmission protocols.  |                |          |
| Priority           | Low   |                |          |
| Estimated Effort   | 3 story points  |                |          |
| Acceptance Tests   | <ol> <li>An SQL database file can be generated by the reference.</li> <li>The database file can be transmitted to the testing.</li> <li>The database file is stored on the testing device.</li> </ol> |                |          |
| Title:             | Add test nodes in local database  | US:            | 5        |
| Modification Date: | 24/08/15  | Sign-Off Date: | N/A      |
| User Story         | As the System Developer, I want the loaded test node SQLite database so that I can interact with the inform   |                | ne local |
| Priority           | Low   |                |          |

| litle:             | Add test nodes in local database   | US:            | 5         |
