Expression of Interest Form

Name: Paul Lee
Student ID: 1264218
BCIS Major: Software Development
──

Name of preferred project: LuminAR
.
Preferred role: Software developer
.
Rationale:
In general I think that this project sounds very cool and interesting. I am interested in creating apps and also the idea of augmented reality. Also learning to use the Unity 3D Engine to create an app would be a very helpful learning experience. Smartphone applications are huge sellers and there is high demand for people who can develop them, building a simple application in the Software Development Practice paper has gotten my very interested in creating more and is something that I like to learn and become familiar with.
